ARDUINO & EMBEDDED SYSTEMS

15-Day Internship Program

Program Overview

This 15-day intensive internship program is designed to provide students with strong foundational knowledge in Embedded Systems and Arduino, along with practical exposure through real-time applications and projects.

Target Audience - Diploma Students – ECE & EEE

Duration - 15 Days (3 to 5 Hours per Day)

What You Will Learn

- Embedded Systems Fundamentals
- Arduino Programming Concepts
- Sensor Interfacing Techniques
- Real-world Project Development

Hands-on Experiments

- LED Blinking & Traffic Light Simulation
- Ultrasonic Distance Measurement
- Temperature & Light Sensor Integration
- Servo Motor & Buzzer Control

Mini Projects

- Smart Parking System
- Automatic Street Light
- Intruder Alarm System

Why Join This Program?

- 80% Practical Learning Approach
- Industry-Oriented Training Methodology
- Internship Certificate upon Completion

Outcome

Gain hands-on experience, build real-time projects, and enhance your technical skills to become industry-ready in Embedded Systems.

Arduino & Embedded Systems Internship Program

Module 1: Foundations of Embedded Systems & Arduino (Day 1–10)

Day 1: Introduction to Embedded System | Arduino

Day 2: Installing Software & Libraries | Programming Arduino

Day 3: Basic Embedded Application using Arduino

Day 4: Analog I/O Rat Trap Design using Laser

Day 5: Mobile Controlled Light & Bluetooth

Day 6: LCD Interface with Arduino

Day 7: RFID Based Authentication System

Day 8: Motion Detection using IR & PIR Sensor

Day 9: Temperature Monitoring System

Day 10: TFT Display Interface with Arduino

Module 2: Sensors, Robotics & Advanced Interfacing (Day 11–20)

Day 11: DC Motor Speed Control using Potentiometer

Day 12: Voice Controlled Robot via Bluetooth

Day 13: Obstacle Avoidance Robot

Day 14: RADAR using Ultrasonic & MATLAB

Day 15: Brain Controlled Robot

Day 16: Distance Measurement using Ultrasonic Sensor

Day 17: Water Level Detection using Internal & External ADC

Day 18: Humidity & Temperature Measurement using DHT11 Sensor

Day 19: Water Quality Measurement

Day 20: Water Flow Detection using Water Flow Sensor

Arduino & Embedded Systems Internship Program

Module 3: Systems, IoT & Real-Time Applications (Day 21–30)

Day 21: Keypad with Arduino

Day 22: LCD Interface – Simulator

Day 23: 7-Segment Display Interface with Arduino

Day 24: Servo Motor Interface with Arduino

Day 25: Stepper Motor Interface with Arduino

Day 26: Power Monitoring System

Day 27: Electrical Fault Detection System – Overload

Day 28: Industry Monitoring System using IoT Technology

Day 29: Audio Speaker & Protocol Experiment using Analog Discovery Kit

Day 30: Li-Fi Based Data Transmission
